How to report a blocked festival gate by radio

At W3 a barrier blocks the accessible lane. Visitors are turning towards the service gate. Give Control those two observations, request the gate lead and listen for the reply.

Work through the example

A duplicate scan can reflect an earlier scan, a device fault or misuse. State what the reader displays and use the organiser's referral process. Keep accessible passage open. Refer searches, ejections and security decisions to the authorised role. A red duplicate warning appears and the alternative lane includes a step. Ask for an accessible option and a lead to review the scan. Give the visitor a clear next step without alleging fraud. Do not invent a diversion through an active vehicle gate.
